

Self Learning Presentations Geometry

All Very Important Skills for University

Purpose:

- 1) Touch up our geometry skills as my communication with the university has brought to light this is one of the most important skills B.Sc. students are missing out of high school.
- 2) There will come a moment in university where you miss a lesson or just don't understand it at all. At this point you may have to teach yourself out of the textbook.
- 3) Develop our skills presenting and working with PowerPoint.

Geometry Lesson

- You will be randomly assigned one of the sections (2.1, 2.2 or 2.3) in the Foundations of Mathematics 11 textbook.
- You are tasked with making a mini lesson in your group to teach the main take away (main concept) in your assigned subchapter.
- There is no time limit for the lesson. Take the time you need to pass the information to your peers. Group members must spend equal time presenting (talking).
- Supply students with a 3 question practice sheet to practice the concept.
- After the presentation you will act as the teacher helping students complete their problem sets and answer their questions.
