

# Assignment 9: School Count Down

- Write a program, which calculates the count of schooldays between the current date (or any user input date) and the end of the school year(inclusive).
- Consider that schooldays are all days from Monday to Friday, which are not public holidays or pro-d days.
- The program should keep a list of predefined public holidays and pro-d days.
- Useful:
- <https://www.sd68.bc.ca/wp-content/uploads/Calendar-2023-2024.pdf>
- Hint:

**Use the class `System.DateTime` and the methods in it. You can execute a loop from the current date (`DateTime.Now.Date`) to the end date, consecutively incrementing the day by the method `AddDays(1)` and count the working days**
